

AKASH BHAT

SOC Analyst

0474 523 118 | akashprakash471@gmail.com | linkedin.com/in/akashbhat01 | Melbourne, VIC

PROFESSIONAL SUMMARY

Cybersecurity analyst with hands-on experience in SIEM platforms, threat detection, alert triage, and incident response, the core functions of a 24/7 SOC environment. Deployed a full enterprise SOC home lab to simulate, detect, and document real attack techniques mapped to MITRE ATT&CK. Proficient in log analysis, IOC investigation, and security event correlation across endpoint, firewall, and application log sources. Experienced in producing structured case documentation and escalation reports for both technical and non-technical stakeholders, directly matching AC3's expectation for clear, accurate alert records and shift handover notes. RMIT Cert IV Cybersecurity graduate. Melbourne-based, open to hybrid in-office and WFH night shifts. Available immediately.

CORE COMPETENCIES AC3 ROLE ALIGNMENT

SIEM & Log Analysis	Splunk (SPL), Wazuh, ELK Stack (Elasticsearch, Logstash, Kibana), Security Event Correlation, IOC Investigation, QRadar, Microsoft SentinelOne
Threat Detection & Triage	Alert Triage, Incident Investigation, Vulnerability Assessment, Endpoint Telemetry (Sysmon), Network Monitoring
Incident Response	IR Plan Development, NIST CSF, Identify, Protect, Detect, Respond, Recover
Network Security	IDS/IPS (Snort, Suricata), Firewall (pfSense), Wireshark Packet Analysis, Network Segmentation
Risk & Compliance	MITRE ATT&CK, NIST Cybersecurity Framework, ISO 27001 Fundamentals, SOCI Awareness, Risk Documentation
Security Tools	Nmap, Nessus, Burp Suite, Metasploit, Hydra, Kali Linux, Active Directory Group Policy
Programming & Scripting	Python, Bash Scripting, SQL, SPL (Splunk Query Language), KPL
Documentation & Collab	Jira, Confluence, Agile/Scrum, Technical Reports, Stakeholder Communications

EXPERIENCE

Security Operations Simulation SOC Level 1

Nov 2025

RMIT University, Melbourne, VIC

- Conducted end-to-end vulnerability assessments across **3 simulated IT environments**, identifying attack vectors including phishing, ARP poisoning, and SYN flood, producing SOCI-aligned risk documentation replicating SOC threat logging workflows.
- Authored a complete Incident Response Plan covering all **5 NIST CSF phases** (Identify, Protect, Detect, Respond, Recover) framework directly applicable to AC3's enterprise SOC environment.
- Deployed pfSense firewall and **Snort IDS/IPS** for real-time intrusion detection; enforced endpoint security controls via Active Directory Group Policy, hardening 10 policy objects to reduce simulated attack surface.
- Automated log monitoring and security validation using **Linux Bash scripts**, improving detection pipeline efficiency and reducing manual triage overhead across the simulated SOC.

Virtual Cybersecurity Analyst

Feb 2026

Commonwealth Bank Cybersecurity Simulation Forage, Remote

- Analysed application log datasets using **Splunk SIEM and SPL queries** to detect anomalous activity patterns and surface Indicators of Compromise (IOCs) directly replicating L1 SOC alert triage workflows.

- Built **investigative dashboards** in Splunk for security event visualisation; communicated findings in structured formats for technical analysts and non-technical stakeholders, matching AC3's case documentation requirements.
- Completed end-to-end simulated incident triage from initial alert through to documented outcome, demonstrating ability to operate within enterprise SIEM environments under realistic time pressure.

Operations Administrator & Project Research Associate

Aug 2025 – Nov 2025

Medilink Australia, Melbourne, VIC

- Produced **structured stakeholder reports** translating complex operational findings into clear written communications for technical and non-technical audiences directly applicable to SOC case records and shift handover documentation.
- Managed sprint tracking across **multiple cross-functional teams** via Jira and Confluence, ensuring consistent process compliance and documentation standards in a regulated, healthcare-adjacent environment.
- Supported compliance documentation and process validation workflows, building applied experience in risk-aware operational practices within a SOCI-relevant sector.

Customer Support Associate

Nov 2024 – Jan 2025

7-Eleven, Melbourne, VIC

- Maintained reliable performance across varied and extended shift patterns in a high-volume, time-pressured environment, demonstrating adaptability to the 24/7 schedule structure of a mature SOC.
- Provided frontline troubleshooting for retail digital systems, applying calm, methodical problem-solving under pressure consistent with SOC operational culture.

TECHNICAL PROJECTS & HOME LAB

Enterprise SOC Detection Lab

Mar 2026 – Present

Wazuh, ELK Stack (Elasticsearch, Logstash, Kibana), Sysmon, Suricata, Kali Linux

- Designed and deployed a fully integrated virtual SOC combining **Wazuh SIEM, Elasticsearch, Logstash, Kibana, Sysmon endpoint telemetry, and Suricata IDS** replicating enterprise-grade continuous security monitoring.
- Simulated and detected **3 attack categories** (reconnaissance, brute-force, reverse shell); investigated alerts via Kibana dashboards, correlating events across endpoint and network log sources to identify IOCs.
- Mapped attacker TTPs to **MITRE ATT&CK framework** and produced formal security reports documenting risk findings, root cause analysis, and mitigation strategies.

SOC Threat Detection Lab

Jan 2026

Splunk, Sysmon, Kali Linux, MITRE ATT&CK

- Configured Sysmon for endpoint telemetry collection forwarded to **Splunk SIEM**; simulated brute-force and reconnaissance attacks, then analysed authentication logs using SPL queries to identify security events and IOCs.
- Mapped detected techniques to MITRE ATT&CK and documented mitigation strategies, building structured risk analysis and reporting capability.

Network Intrusion Detection Lab

Feb 2026

pfSense, Snort IDS, Wireshark, Kali Linux

- Architected a **segmented virtual network** and authored custom Snort IDS rules to detect port scanning and SYN flood attacks; captured and analysed malicious traffic using Wireshark.
- Developed and validated **firewall policy sets** in pfSense to mitigate detected intrusion techniques, documenting configuration rationale for security review.

EDUCATION

Certificate IV in Cybersecurity

Feb 2024 – Jan 2025

RMIT University, Melbourne VIC

Bachelor of Technology, Aeronautical Engineering

Jun 2018 – Jun 2022

Jain University, Bangalore, India

ADDITIONAL

Work Rights: Full working rights in Australia

Location: Australia

Availability: Available for 24/7 SOC shift patterns, including in-office day shifts and WFH night shifts
